

AdIRC - Echomonitor - # 5

Added in 2.3

/echomonitor [color] [-hcrtnuvwN] [color name] <text>

Prints text in the server or channel monitor using the specified color (0 to 99).

See also [Monitor Panels](#).

Switches

- h - Print to the channel monitor instead of server monitor.
- c - Indicates [color] is a color name.
- f - Apply flash options.
- tN - Apply timestamp prefix options. N is a optional UTC value to use for the timestamp.
- u - Disables using first word as prefix for nick column.
- v - Treats first word as a timestamp.
- wN - if N = 0, replaces emoticon tags in all token except the first one, N = 1, replaces only the first token, N = 2, replaces all tokens.

Parameters

[color] - A numeric color value to use as line color (0 to 37).

[color name] - Used with the -c switch. One of the following: Action, ctcp, highlight, info, info2, invite, join, part, quit, kick, mode, topic, nick, normal, notice, notify, other, own, wallops, whois.

<text> - The text to print.

Example

```
; Print 'Some text' to the Server monitor.  
/echomonitor -t Some text
```

```
; Print 'Some text' to the Channel monitor.  
/echomonitor -ht Some text
```
