

Editbox Options

[Editbox](#) is the control/box where you type messages.

See also [/editbox](#), [\\$editbox](#), [on TABCOMP](#).

Use global Editbox history

If enabled, Editbox up/down history will be the same for each window, otherwise each window has its own up/down history.

Save and restore history

If enabled, Editbox history will be saved and restored across sessions.

Disable script evaluation in Editbox

If enabled, typing \$identifier<tab> and //commands will not be evaluated in the Editbox.

Autocomplete code tags

If enabled, typing ""(<[{}*~_- will enclose the selected text with the appropriate tags.

Spellcheck color

Sets the colors to use when [spellchecking](#) is enabled and underlining misspelled words.

Max history

Set the maximum number of Editbox history to save.

Editbox Lines

If set to automatic, Editbox will automatically resize to fit the text up to half the window size, otherwise it will always show the chosen number of lines.

Tabcomplete order

Sets the order to cycle [Tabcomplete](#) nicks. A-Z = alphabetically, Last spoke order = in the order a nick last spoke on the current channel.

Include joins

When a nick joins, it's included when cycling [Tabcomplete](#) regardless if that nick ever spoke.

Tabcomplete suffix

Word or characters to display after the nick when using [Tabcomplete](#), e.g ":" to display "Nick:"

This is the suffix for any word in the [Editbox](#) except the first word.

Tabcomplete first word Suffix

Word or characters to display after the nick when using [Tabcomplete](#), e.g ":" to display "Nick:"

This is the suffix for the first word in the [Editbox](#).
