

AdiIRC - Fseek - # 8

Added in 1.8.10

/fseek [-Inrwp] <handle> <position | line number | wildcard | regex>

Sets the read/write pointer to the specified position in the file.

- l - Set position to line 'line number'.
- n - Set position to start of the next line.
- r - Set position to text matching '[regex](#)'.
- w - Set position to text matching '[wildcard](#)'.
- p - Set position to start of the previous line.

Parameters

<handle> - The file handle to seek.

<position | line number | [wildcard](#) | [regex](#)> - The position/Line number with -l/[Wildcard](#) with -w/[regex](#) with -w to set.
