

## AdiIRC - Globalkeys - # 7

*Added in 2.9*

### **/globalkeys [-adu] [key] [command]**

Adds a global hotkey which will trigger without AdiIRC window being focused.

Format is key+key.

Modifiers: Ctrl, Shift, Alt.

Valid key names can be found [here](#).

*Typing /globalkeys with no parameters lists the current keys.*

### **Switches**

-a - Adds a new key.

-d - Deletes a key.

-u - Updates the command for a key.

### **Parameters**

[key] - The key to add.

[command] - The command to run when the key is pressed.

### **Example**

```
; Create a alias called 'ctrldcommand'.
alias ctrldcommand { echo -ag ctrl+d was pressed }

; Register the shortcut Ctrl+D.
/globalkeys -a Ctrl+D /ctrldcommand
; Pressing CTRL+D will now execute the '/ctrldcommand' alias.

; Unregister the hotkey.
/globalkeys -d Ctrl+D
```
