

AdiIRC - Guser - # 1

Added in 1.9.7

/guser [-a] <levels> <nick|address> [type] [info]

Same as [/user](#) except looks up the address first using [/userhost](#).

Adds the specified nick/address to the users list with the specified levels.

If the first level is not preceded by an equal sign then it is a general access level.

Switches

-a - Adds the levels to the matching user, if no user is found, a new user is added.

Parameters

<levels> - Access level(s) to add.

<nick|address> - Nick or address to add.

[type] - Lookup the address using this type of address.

[info] - Optional information text.

Example

```
; Adds a new user 'Nick' with access levels 1, 2 and 3.  
/guser 1,2,3 Nick
```

```
; Updates access levels for 'Nick' with 4 and 5.  
/guser -a 4,5 Nick
```

```
; Updates access levels for 'Nick' with 7 and 7.  
; By using = in front of the first access level, the default access level for this user is not modified.  
/guser -a =6,7 Nick
```
