

AdiIRC - ialmark - # 4

Added in 1.9.9

/ialmark [-nrw] <nick> [name] [text]

Marks the IAL entry for a nickname with the specified text.

See also [\\$ialmark](#), [\\$ial](#).

Switches

- n - Indicates [name] is defined, If -n is not Defined, the default name 'default' is used.
- r - Removes the mark.
- w - Indicates [name] is a [wildcard](#).

Parameters

- <nick> - Nick to mark.
- [name] - Name of the mark.
- [Text] - Text to mark.

Example

```
; Mark the nick 'Nick' with the text 'Hello World'.
/ialmark Nick Hello World

; Print the mark.
//echo -ag $ial(Nick).mark

<pre>
; Sets a mark for the nick 'nick' with the name 'markname' and the text 'mark text'.
/ialmark -n nick markname mark text

; Retrieve the mark text for the name 'markname'.
//echo -ag $ialmark(nick, markname)
</pre>
```
