

AdiIRC - /iline - # 7

Added in 2.2

/iline [-ahilnpsbTNSW] [color] <@name> <N> <text>

Inserts <text> into the Nth line in a custom window named <@name>.

Switches

- a - Selects the newly added item while keeping the old selection in a listbox
- h - Highlights the window's node in the [Treebar/Switchbar](#) if the window is minimized
- iN - Indents the wrapped line by N characters.
- l - Specify the action to take place on the side-listbox
- n - Prevent the line from being added if it already exists
- p - **TODO**
- s - Clears the old selection in a listbox and selects the newly added item
- b - Indicates the [c] color is in [\\$rgb](#) format. **(AdiIRC only)**
- TN - Apply timestamp prefix options. N is a optional UTC value to use for the timestamp. **(AdiIRC only)**
- S - Use status window. **(AdiIRC only)**
- W - Allow using a channel or query window name for @name. **(AdiIRC only)**

Parameters

[color] - Line color number.

<@name> - The custom window name.

<N> - The line number to insert the text at.

<text> - The text to add.

Example

```
; Open a custom window.
```

```
/window -de @Example
```

```
; Add 3 blue colored lines.
```

```
