

AdiIRC - Inc - # 7

Added in 1.9.0

/inc [-cesuNzB] <%var> [value]

Increase the value of %var by value.

See also [/dec](#), [/set](#), [/var](#).

Switches

- c = increase %var by value every second.
- e = Unset the variable when AdiIRC exits.
- s = Prints out the value of the variable.
- uN = Increase %var by value then unset the variable after N seconds.
- z = Decrease %var by value every second until zero and then unset the variable.
- k = **TODO**

Parameters

<%var> - The variable to increase.

[value] - The value to increase by, default is 1.

Example

```
alias example {  
    ;Create a local variable and set it to 5.  
    /var %x 5  
  
    ;Increase %x by 5.  
    /inc %x 5  
  
    ;Print out %x's content.  
    /echo -a %x  
}
```
