

AdiIRC - Lock - # 2

Added in 1.9.4

/lock [-r] <password>

Set a password and hide the main AdiIRC window, no window interaction is allowed until the correct password is entered.

[\\$locked](#) can be used to test if AdiIRC is locked or not.

AdiIRC can also be locked down by holding the Control key down while minimizing the main window

Switches

-r - Remove the lock.

Parameters

<password> - Password to set.
