

## AdiIRC - Log - # 1

*Added in 2.3*

**/log <on|off> <window> [-f filename]**

Turns on/off logging for a window to a specific file.

### Parameters

<on|off> - Turns logging on or off.

<window> - Window to turn logging on or off for.

[-f filename] - Filename to log to. (optional)

### Example

```
; Enable logging for channel '#adiirc' to specific log file 'Logs\#adiirc.log'.  
/log on #adiirc -f Logs\#adiirc.log
```
