

AdiIRC - Logs - # 6

Added in 1.9.0

/logs [-defrxgc] [directory] [filename] [text]

Opens the [Logs Manager](#) and does a optional custom search.

[Wildcards](#) can be used for all parts.

Switches

- d - Indicates directory is defined.
- e - Exclude sub directories in the search.
- f - Indicates filename is defined.
- r - Indicates text is a [regular expression](#) instead of a [wildcard](#).
- x - Use exact text match.
- g - Indicates filename is a [regular expression](#) instead of a [wildcard](#).
- c - Use exact filename match.

Parameters

[directory] - Log directory to search, used with -d.

[filename] - Filename to search, used with -f.

[text] - Log text to search.

Example

```
; Open log folder with default log folder listing.  
/logs
```

```
; Open log folder with custom folder and a regular expression matching all lines containing Hello.  
/logs -dr "c:\logs folder" .*Hello.*
```
