

Monitor Panels

Monitor panels are a set of panels which allows you to monitor various information for all or some windows/events.

Panels can be enabled/disabled from the View menu or from the [/dockpanels](#) command.

By default they are docked inside AdiIRC to the left,right,top or bottom and can be grouped together as tabs or split side-by-side or top-to-bottom.

Panels can also be stacked on top/bottom of each other or to the right/left of each other.

The position,size and dock status of all panels are saved and restored.

There are various options for the monitor panels in [Options](#) -> [Monitor Panels](#).

Add/Remove a Monitor Panel

To add a monitor to your current layout, click the name of the monitor panel you want to add in Menubar -> View.

To remove a monitor panel you can right-click -> Remove in the monitor itself, in the tab or in the control header.

See also [dockpanels](#).

Show/Hide Monitor Panels

Clicking the Menubar -> View -> Monitor Panels menu or pressing the hotkey F2 will show or hide all monitor panels except the ones that are pinned or are detached as windows.

Moving a monitor panel

To move a panel, either grab the tab or the control header and drag it to where you want it to be, if you drag it on top of another panel, it will become a tab, if you drag it to the left, right, top or bottom, it will split the current panel into two and show them side by side or top/bottom.

If you drag it to the middle of the AdiiRC main window, it will become a detached window.

"Lock Bars" must be disabled to move a panel, to disable, right-click in Menubar/Toolbar/Switchbar/Statusbar/Treebar.

Detach a monitor panel into a window

Monitor panels can also be detached from AdiiRC as a separate window, by right-click menu "Undock" or by dragging it to the middle of the AdiiRC main window.

When detached, the window can then be attached to AdiiRC as a regular window by pressing CTRL + D.

Attach a monitor window into a panel

Grab the Titlebar of the window, and drag it to where you want it to be, if you drag it on top of another panel, it will become a tab, if you drag it to the left, right, top or bottom, it will split the current panel into two and show them side by side or top/bottom.

You can also right-click the window and chose the Dock menu, this will dock the monitor panel to the first other container panel it finds, or create a new container panel.

"Lock Bars" must be disabled to move a panel, to disable, right-click in Menubar/Toolbar/Switchbar/Statusbar/Treebar.

Pinning

If the pin icon is clicked, the monitor will be pinned and will be excluded when you press F2 to view/hide the monitors.

Click the pin icon again to unpin.

Treebar

Shows the Treebar.

Server messages

Monitors server/status messages for all servers.

Channel messages

Monitors channel messages for all channels on all servers.

Private messages

Monitors private messages for all private chats on all servers.
