

Plugins

See [here](#) for native DLL support.

See <https://dev.adiirc.com/boards/4/topics/146> for more about plugins.

Added in 1.8

/plugins [-luixo] [filename]

With no switches, opens or focuses the [Plugin Manager dialog](#).

Switches

- l - Loads a installed plugin file.
- u - Unloads a loaded plugin file. (Plugin file is still locked until AdiIRC is closed)
- i - Installs a new plugin to the plugin folder.
- x - Uninstalls a installed plugin in the plugin folder.
- o - Used with -i, allows overwriting a installed plugin, if the plugin is not loaded.

Parameters

[filename] - Filename/path of the plugin.

Example

```
; Installs the plugin 'MyPlugin.dll' from the folder 'C:\User<\Nick\Desktop' to the Plugins folder
.  
/plugins -i C:\User<\Nick\Desktop\MyPlugin.dll  
  
; Loads 'MyPlugin.dll'  
/plugins -l MyPlugin.dll
```
