

AdiIRC - Protect - # 2

Added in 3.8

/protect [-lrw] <on|off|nick|address> [#channel1,#channel2,...] [type] [network]

add/remove/list users from the protect list.

/protect with no parameters shows [\\$true](#) if protect is enabled, otherwise [\\$false](#).

See also [\\$protect](#), [/aop](#), [/avoice](#), [\\$aop](#), [\\$avoice](#).

Switches

- l - Prints all protect users.
- r - Removes a address from the protect list. (if no address is specified, clears the protect list)
- w - Indicate the protect should be enabled on all networks.

Parameters

- on - Turns protect on.
- off - Turns protect off.
- address - The address or nick to add/remove from the protect list.
- [#channel1,#channel2,...] - List of channels to protect in.
- [type] - A number representing a [\\$mask](#) to use. (if user is not found in the internal address list, a lookup is performed)
- [network] - The network to protect in.

Example

```
; Adds 'nick!nick@42.42.42.42' to the protect list on the channel '#channel'  
/protect nick!nick@42.42.42.42 #channel
```

```
; Adds 'nick!*@*' to the protect list on any channel.  
/protect nick
```

```
; Remove 'nick!nick@42.42.42.42' from the protect list.  
/protect -r nick!nick@42.42.42.42
```
