

AdiIRC - Raw - # 6

Added in 1.9.3

/raw [on|off]

Switches numeric events on/off, if no parameters are defined, current status is shown.

See also [/ctcps](#), [/events](#), [/remote](#).

Added in 1.5

/raw [-nq] <command>

Sends the specified command directly to the server. You must know the correct raw format of the command you are sending.

Same as [/quote](#).

Switches

-n - Prevents characters in the range 0-255 from being UTF-8 encoded, as long as the line contains characters only in the range 0-255.

-q - Makes the command work quietly without printing what it is sending.

Parameters

<command> - The command to send to the server.

Example

```
;Send a raw PRIVMSG to the server.  
/raw PRIVMSG #channel :Hi testing rawdata.
```
