

AdiIRC - Reload - # 14

Added in 1.9.0

```
/reload -aN <filename>  
/reload -bcmnpqs <filename>  
/reload -rsuv <filename>
```

The /reload command can be used to reload any type of existing file including: aliases, popups, remote, users, and variables. Using /reload on an already loaded file will update its contents while maintaining its order among other files. Note that unlike the [/load](#) command, [/reload](#) will not trigger the [on LOAD](#) and [on START](#) events.

See also [/load](#), [/unload](#), [on LOAD](#), [on UNLOAD](#), [on START](#).

Switches

- aN - loads an aliases file, if N is specified, load into the Nth position in the alias list.
- b - Loads a nicklist buttons file. **(AdiIRC only)**
- ps - Loads a status popup file.
- pc - Loads a channel popup file.
- pq - Loads a query popup file.
- pn - Loads a nicklist popup file.
- pm - Loads a menubar popup file.
- pe - Loads a channel link popup file. **(AdiIRC only)**
- pi - Loads a link popup file. **(AdiIRC only)**
- ru - Loads a user list file.
- rv - Loads a variables file.
- rsN - Loads a remote scripts file, if N is specified, load into the Nth position in the script list.

Parameters

<filename> - Filename to (re)load.
