

AdiIRC - Rline - # 8

Added in 1.9.5

`/rline [-ahslbTNSW] [c] <@name> <N> <text>`

Replaces the Nth line in any window with a new line.

Switches

- a - Selects the newly added item while keeping the old selection in a listbox.
- h - Highlights the window's node in the treebar if the window is not active.
- s - Clears the old selection in a listbox and selects the newly added item.
- l - Specify the action to take place on the side-listbox,
- b - Indicates the [c] color is in `$rgb` format. **(AdiIRC only)**
- TN - Apply timestamp prefix options. N is an optional UTC value to use for the timestamp. **(AdiIRC only)**
- S - Use status window. **(AdiIRC only)**
- W - Allow using a channel or query window name for @name. **(AdiIRC only)**

Parameter

- [c] - An optional color number for the line
- <@name> - Name of the window.
- <N> - The line to change.
- <text> - Text to insert.

Example

```
alias example {  
    ; Open a custom window.  
    /window -de @Example  
  
    ; Add a line with the text 'Line A'.  
    /aline @Example Line A  
  
    ; Add a line with the text 'Line B'.  
    /aline @Example Line B  
  
    ; Add a line with the text 'Line C'.  
    /aline @Example Line C  
  
    ; Change the text of the second line to 'Line D'.  
    /dline @Example 2 Line D  
}
```
