

## AdiIRC - Showmenu - # 9

*Added in 2.7*

**/showmenu [-qnmcsuwad] [window|nick] [nick] [x y]**

Shows the specified context-menu type for current active window or [window|nick].

By default the menu opens relative to the current active [Editbox](#).

### Switches

- q - Show the Query menu.
- n - Show the Nicklist menu.
- m - Shows the [Menubar](#) menu.
- c - Shows the Channel menu.
- s - Shows the Status menu.
- u - Shows the specified @custom menu.
- w - Shows the Window menu.
- a - Shows the [Menubar](#) as a context menu. (while the context menu is open, the regular Menubar will be empty)
- d - Indicates the [x y] positions are relative to the desktop instead of the active window.

### Parameters

[window|nick] - Window or query nick to open the menu for.

[nick] - The Nicklist/Query nick to open the menu for.

[x y] - The X and Y position to open the menu at (relative to the associated window).

### Example

```
; Opens the channel menu for the channel #test at x y position 42 42.  
/showmenu -c #test 42 42
```

```
; Show the whole Menubar menu when clicking a /toolbar item.  
/showmenu -ad $toolbar(1).dx $toolbar(1).dy
```
