

AdiIRC - Signal - # 2

Added in 1.9.0

/signal [-n] <name> [parameters]

Trigger on SIGNAL events in all scripts that listen for signals.

Switches

-n - Makes the script trigger immediately.

Parameters

<name> - Signal to trigger.

[parameters] - Parameters to send to the signal.

Example

```
;Setup a listening SIGNAL event.  
on *:SIGNAL:testsignal:echo -a Signal was called with parameters: $1-  
  
;Call the testsignal with parameters Hello world!  
/signal testsignal Hello world!
```
