

AdiIRC - Timestamp - # 1

Added in 1.9.7

/timestamp [-f|g|s|a|e] [on|off|default] [windowname]

Turns on/off timestamp globally or per window.

Switches

- f - Sets the timestamp event format.
- g - Sets the timestamp log format.
- s - Sets timestamp status for the status window.
- a - Sets timestamp status for the active window.
- e - Sets timestamp status for all open windows.

Parameters

[on|off|default] - Set timestamp status to on, off or default.

[windowname] - Set timestamp status for windowname.

Examples

```
; Changes the timestamp format  
/timestamp -f [%HH:%nn]
```

```
; Enables global timestamp  
/timestamp on
```

```
; Disables timestamp for #channel  
/timestamp off #channel
```
