

## AdiIRC - Tokenize - # 2

*Added in 1.9.0*

**/tokenize <C> <text>**

Fills the \$1 \$2 ... \$N identifiers with tokens in <text> separated by character <c>.

### Parameters

<C> - The [ASCII](#) value to separate by.

<text> - The text to separate.

### Example

```
; Separate the text "one:two:three" by ASCII value 58 (:)  
//tokenize 58 one:two:three | echo -a Result of $!2: $2
```
