

Translations

AdiIRC supports multiple languages, if you want to contribute a translation for your own language, you can do that at [Get Localization](#) – a friendly online platform we use to manage the translations.

When a new version of AdiIRC is released, all the translation changes is compiled and added to the installer, as well as the download list below.

You can [contact](#) us to request a update to the download list if you want to test something.
It is not necessary in most cases to test the width of a text, most user interface elements will dynamically resize itself to fit the text.

How to install

1. Create a subfolder inside your [AdiIRC installation path](#) with the same name as the locale, e.g **en-US** for English **da-DK** for Danish **pt-BR** for Brazilian Portuguese etc.
2. Download the translation in the **Downloads** section below.
3. Unzip the translation.
4. Copy the **AdiIRC.resources.dll** file to the local folder you created earlier. e.g **C:\AdiIRC\da-DK\AdiIRC.resources.dll**
5. Go to [Options](#) -> [General](#) -> [Choose Language](#), and select the locale in the dropdown box
6. Restart AdiIRC to use the new language.

A GUI to install translations is being considered.

Update a translation

1. Close AdiIRC.
2. Download the updated translation in the **Downloads** section below.
3. Unzip the translation.
4. Copy the **AdiIRC.resources.dll** to the locale folder and overwrite the previous one, e.g **C:\AdiIRC\da-DK\AdiIRC.resources.dll**
5. Start AdiIRC.

Automated update of translations is being considered.
